

RIDING THROUGH NYC: INSIGHTS FROM 2024

Presented by: Rabeea Ali

THE PROBLEM

How can we use New York City's millions of yearly yellow-taxi trip records to uncover meaningful patterns in demand, pickup hotspots, rider behavior, and pricing, so that planners and transportation authorities can better understand city movement and make data-driven decisions around mobility and congestion?

THE GOAL

- Analyze how yellow-taxi demand changes by hour, day, and month to understand when New York is busiest.
- Identify which pickup zones, vendors, and payment methods influence trip patterns, fares, and tips.
- Examine how external factors, like rush hours, weekends, and airport travel impact overall ride behavior and revenue.

THE AUDIENCE

- City planners and transportation authorities who need insights to improve mobility and manage congestion.
- Government and policy teams who rely on travel patterns to guide infrastructure and transportation decisions.
- Taxi operators, mobility companies, and urban analysts who depend on understanding rider behavior, pricing, and demand.

NYC YELLOW TAXI TRIPS — 2024 SNAPSHOT

Total Trips:
41.7 Million

Total Revenue:
\$929.46 Million

Avg Fare per Mile:
\$12.38

Airport Trips:
3.2 Million

Avg Trip Duration:
17 mins

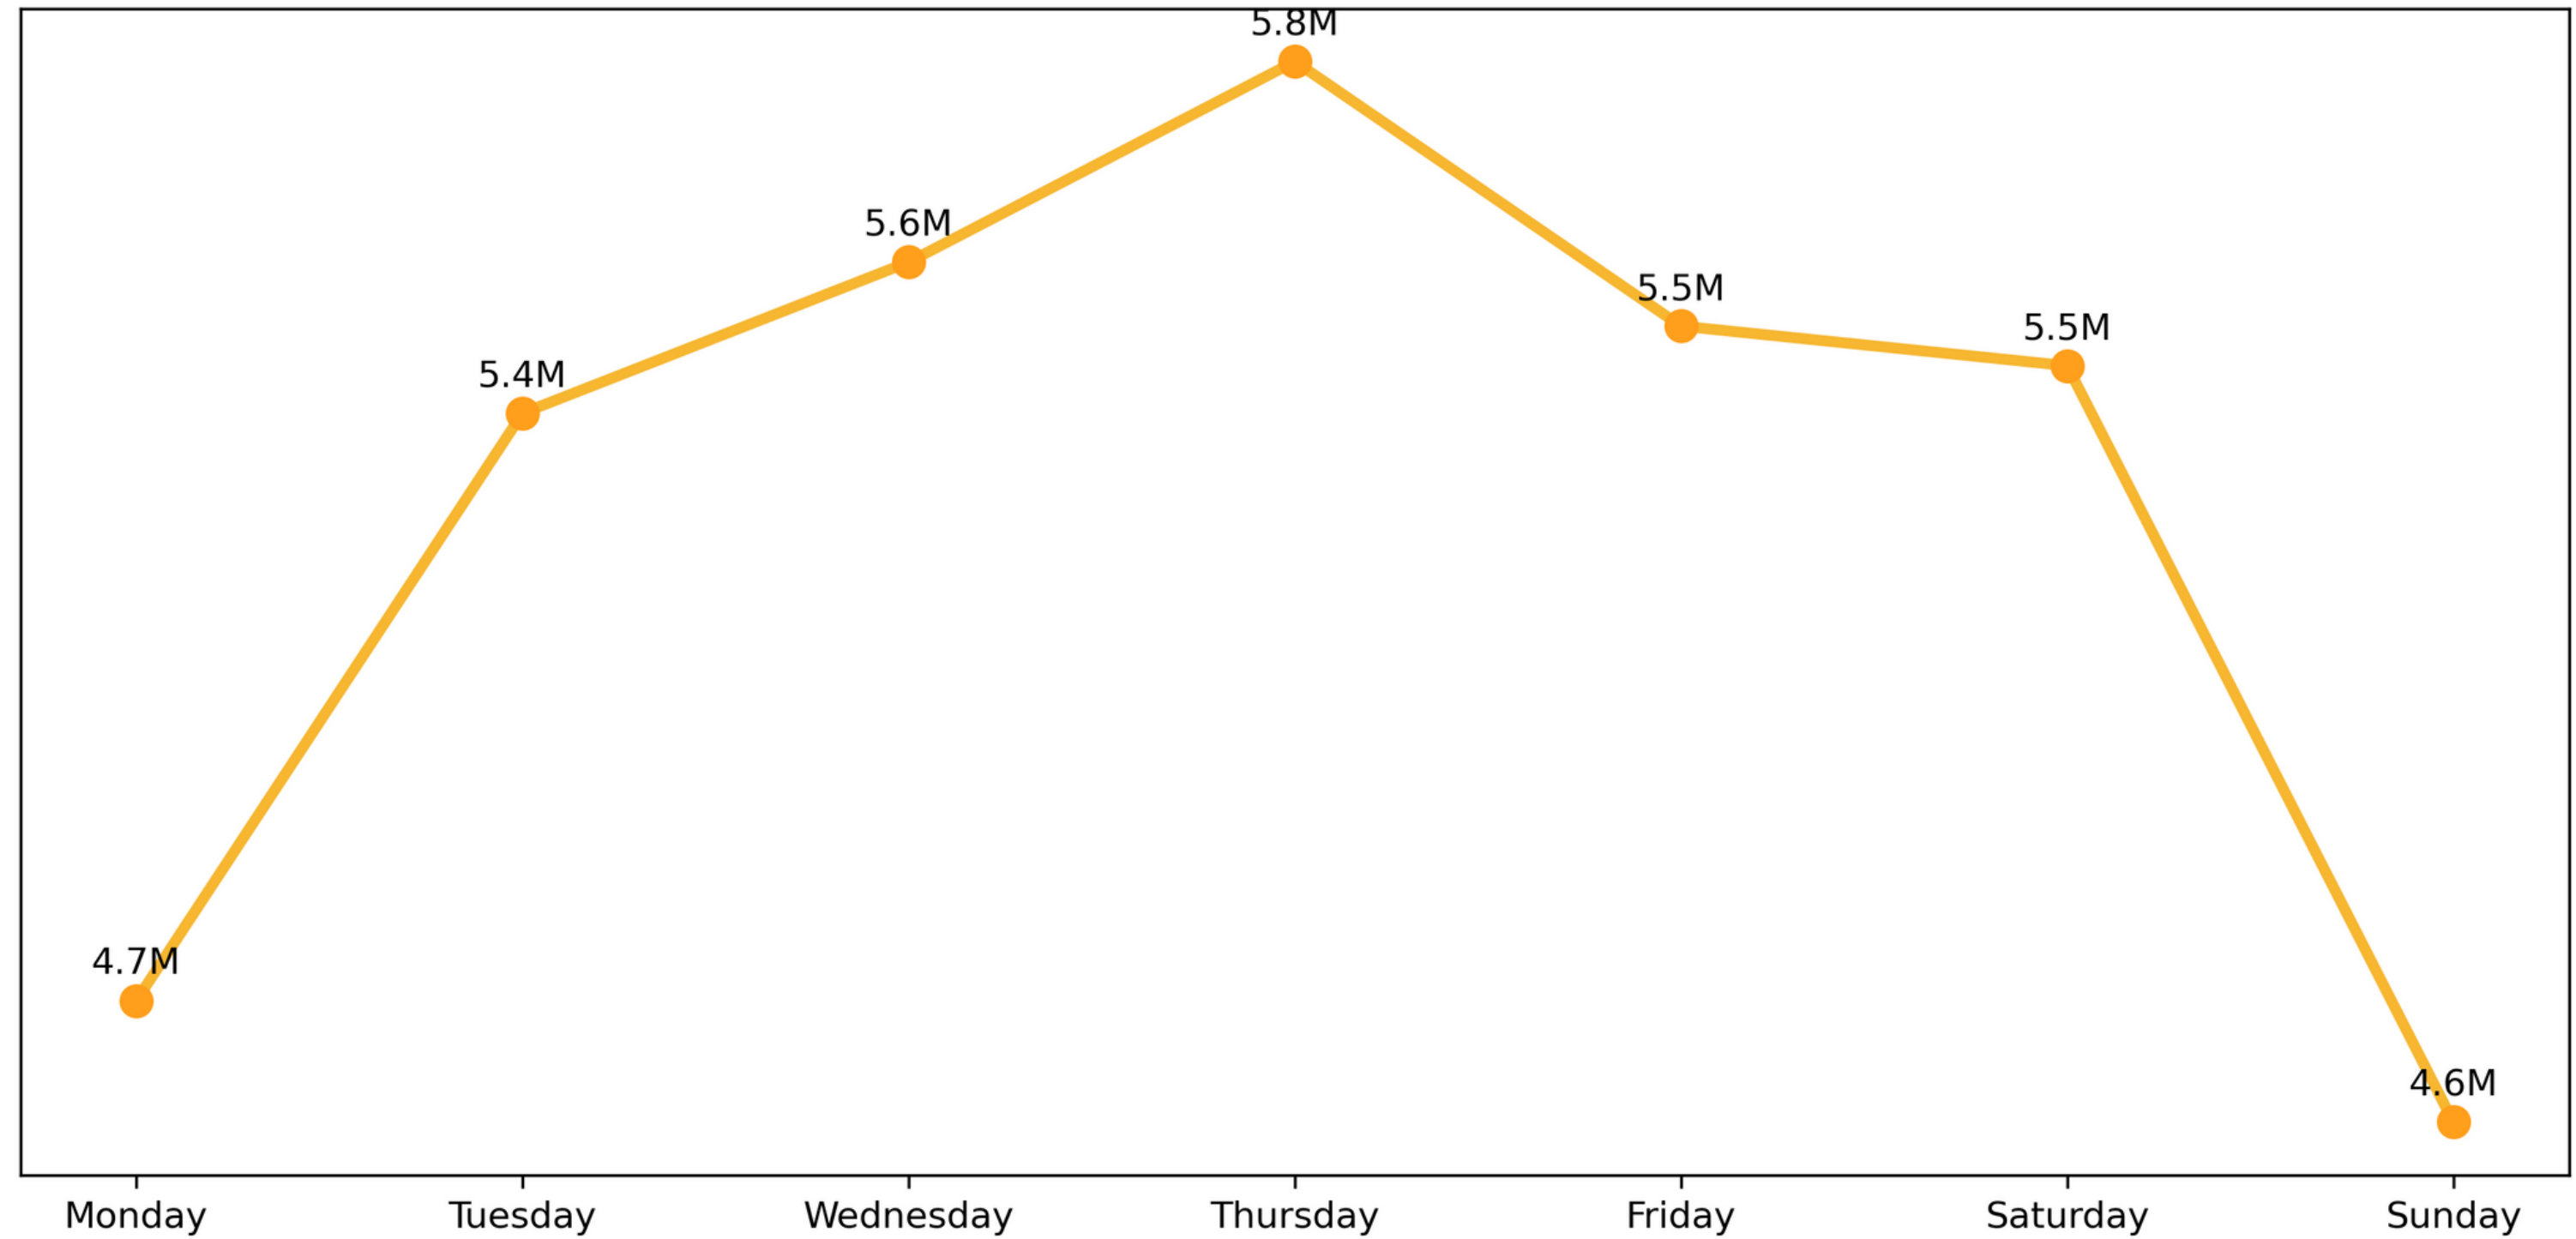

Total disputed
Trips: 0.79 Million

Busiest Month for Taxi Trips

Daily Ride Demand in NYC

Vendor Performance in NYC

RECOMMENDATIONS

- **Optimize traffic** flow in high-demand zones during peak hours.
- **Allocate transportation resources** based on borough-level taxi usage.
- **Adjust fleet distribution** to match hourly and monthly demand patterns.
- **Enhance forecasting models** by combining taxi data with weather, events, and flight information.

LIMITATIONS

- The dataset includes only yellow taxis, not Uber, Lyft, or green cabs so it **doesn't represent all NYC transportation**.
- **Pickup and drop-off zones are broad areas**, not precise GPS locations, limiting location accuracy.
- **The dataset doesn't include external factors** like weather, events, or holidays that strongly affect taxi demand.
- **Payment and tipping behavior** can be misleading.

THANK YOU
